

Save Money by Saving Power

Optimise the voltage for electrical equipment in your business.

Make it last longer and cost less to run.

Most of the UK's electrical equipment is optimised to 220-230v for the European market yet the UK's electrical infrastructure is designed to operate at 240v. Optimise the supply of power to electrical devices across your business and make a substantial energy saving whilst prolonging the life of your equipment and lighting.

Install ECO-MAX voltage optimisation in your business

- ⚡ Typical returns of 25-50% per annum on your investment
- ⚡ 2-4 year payback
- ⚡ Prolong the life of your electrical machinery
- ⚡ Address power quality issues
- ⚡ Address Power Factor Correction, Harmonic Filtration and Surge Protection issues
- ⚡ Quick and easy to fit with little disruption
- ⚡ 5 year warranty (extendable with servicing)
- ⚡ UK manufacturer
- ⚡ Reduces your Carbon Footprint
- ⚡ Finance options available; cash positive from day one
